Question:

Find the area bounded by the curves y = |x - 1| and y = 1.

Solution

1. Representing Lines in Matrix Form

We express the three boundary lines in the vector form $\mathbf{n}^T \mathbf{x} = c$, where \mathbf{n} is the normal vector and $\mathbf{x} = \begin{pmatrix} x \\ y \end{pmatrix}$.

$$\mathbf{n_1} = \begin{pmatrix} 1 \\ -1 \end{pmatrix}, c_1 = 1 \implies \begin{pmatrix} 1 \\ -1 \end{pmatrix} \mathbf{x} = 1 \tag{1}$$

$$\mathbf{n_2} = \begin{pmatrix} 1 \\ 1 \end{pmatrix}, c_1 = 1 \implies \begin{pmatrix} 1 & 1 \end{pmatrix} \mathbf{x} = 1 \tag{2}$$

$$\mathbf{n_3} = \begin{pmatrix} 0 \\ 1 \end{pmatrix}, c_1 = 1 \implies \begin{pmatrix} 0 & 1 \end{pmatrix} \mathbf{x} = 1 \tag{3}$$

2. Finding Vertices with Augmented Matrices

The intersection of any two lines is the solution to a system of linear equations, which we solve using Augmented Matrices.

*Vertex A (Intersection of L*₁ *and L*₂):

$$\begin{pmatrix} 1 & -1 & 1 \\ 1 & 1 & 1 \end{pmatrix} \xrightarrow{R_2 \to R_2 - R_1} \begin{pmatrix} 1 & -1 & 1 \\ 0 & 2 & 0 \end{pmatrix} \tag{4}$$

$$\begin{pmatrix} 1 & -1 & 1 \\ 0 & 2 & 0 \end{pmatrix} \xrightarrow{R_2 \to \frac{1}{2}R_2} \begin{pmatrix} 1 & -1 & 1 \\ 0 & 1 & 0 \end{pmatrix} \tag{5}$$

$$\begin{pmatrix} 1 & -1 & 1 \\ 0 & 1 & 0 \end{pmatrix} \xrightarrow{R_1 \to R_1 + R_2} \begin{pmatrix} 1 & 0 & 1 \\ 0 & 1 & 0 \end{pmatrix}$$
 (6)

$$\mathbf{A} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \tag{7}$$

Vertex B (Intersection of L_1 and L_3):

$$\begin{pmatrix} 1 & -1 & 1 \\ 0 & 1 & 1 \end{pmatrix} \xrightarrow{R_1 \to R_1 + R_2} \begin{pmatrix} 1 & 0 & 2 \\ 0 & 1 & 1 \end{pmatrix}$$
 (8)

$$\mathbf{B} = \begin{pmatrix} 2 \\ 1 \end{pmatrix} \tag{9}$$

Vertex C (*Intersection of L*₂ *and L*₃):

$$\begin{pmatrix} 1 & 1 & 1 \\ 0 & 1 & 1 \end{pmatrix} \xrightarrow{R_1 \to R_1 - R_2} \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 1 \end{pmatrix} \tag{10}$$

$$\mathbf{C} = \begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{11}$$

The vertices are $\mathbf{A} = \begin{pmatrix} 1 \\ 0 \end{pmatrix}$, $\mathbf{B} = \begin{pmatrix} 2 \\ 1 \end{pmatrix}$, and $\mathbf{C} = \begin{pmatrix} 0 \\ 1 \end{pmatrix}$.

3. Calculating Area with Vector Determinant

We form two vectors representing two sides of the triangle, AB and AC.

$$\mathbf{AB} = \mathbf{B} - \mathbf{A} = \begin{pmatrix} 2 \\ 1 \end{pmatrix} - \begin{pmatrix} 1 \\ 0 \end{pmatrix} = \begin{pmatrix} 1 \\ 1 \end{pmatrix} \tag{12}$$

$$\mathbf{AC} = \mathbf{C} - \mathbf{A} = \begin{pmatrix} 0 \\ 1 \end{pmatrix} - \begin{pmatrix} 1 \\ 0 \end{pmatrix} = \begin{pmatrix} -1 \\ 1 \end{pmatrix} \tag{13}$$

The area is half the absolute value of the determinant of the matrix formed by these two vectors.

$$Area = \frac{1}{2} \left\| \left(\mathbf{B} - \mathbf{A} \right) \times \mathbf{C} - \mathbf{A} \right\| \tag{14}$$

Area =
$$\frac{1}{2} \begin{vmatrix} 1 & -1 \\ 1 & 1 \end{vmatrix}$$
 (15)

$$=\frac{1}{2}(1(1)-(-1)(1))\tag{16}$$

$$= \frac{1}{2}(1+1) = \frac{1}{2}(2) = 1 \text{ square unit.}$$
 (17)
